

Powering Your Data Movement for the Data Cloud

Make every decision data-driven with reliable, high-volume data integration that scales with the Data Cloud

Fivetran enables you to continuously replicate and integrate data from SaaS apps and databases to the Snowflake Data Cloud. Fivetran offers a user-friendly, enterprise-grade solution set for complex, high-volume data needs.

With Fivetran + Snowflake, you can:

- **Scale:** Centralize all data in the Data Cloud to deliver more impactful business insights
- **Automate:** Reduce pipeline downtime due to API changes, lower administrative costs, and increase staff productivity with higher value work
- **Securely Replicate:** Integrate data with the confidence that your solution meets the most stringent data security standards

Data Accessibility with Scale

- Easily connect hundreds of SaaS and on-prem connectors to the Data Cloud for fast, continuous, data delivery across the business
- Low impact/high-volume: Log-based CDC delivers high data volumes in real-time to the Data Cloud without impacting the source systems

Automated, Zero Maintenance Data Pipelines

- Continuous, fast data delivery with minimal configuration
- Connections made easy with point and click functionality
- Benefit from a self-healing architecture

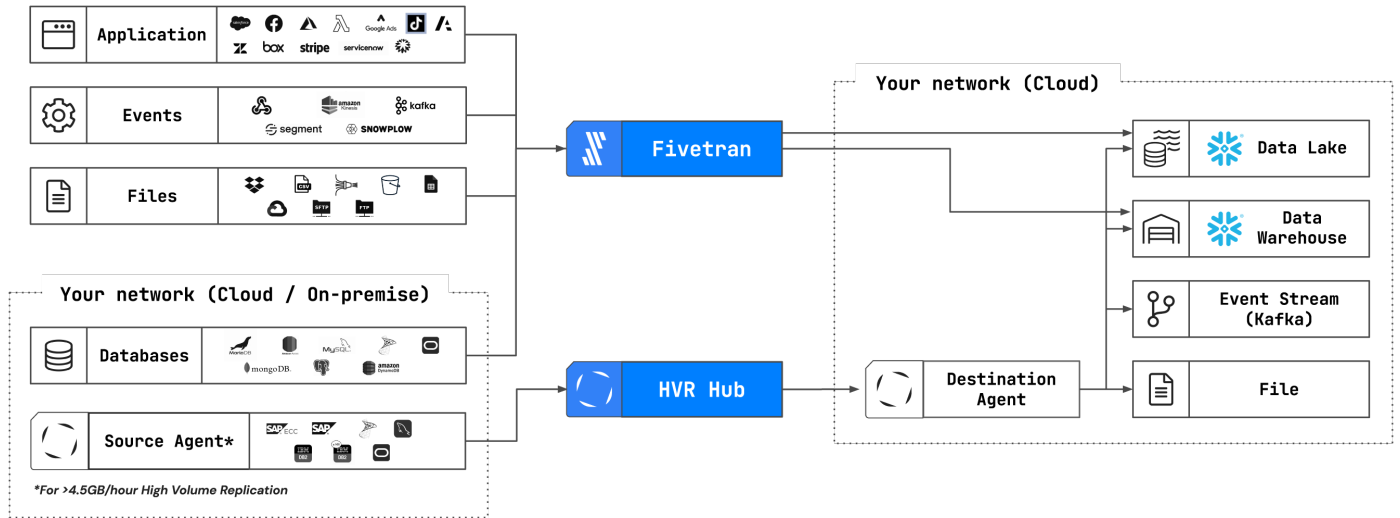

Secure Data Replication

- Tested through the most rigorous certifications
- Data encryption in transit and at rest
- Private Link, a feature that enables secure network traffic to cloud destinations, avoids internet and exposure to security threats
